Caden Gross - PuddyTat Pastries Menu

This code is designed to show a menu, using a scanner, a while loop for animation, math, and some variables to make it nice.

```
---------------------------------
|                               |
\ Welcome to PuddyTat Pastries  \
| We swear the food isn't puddy |
\                               \
|          ~ Prices ~           |
\Purrfect Puff Pasteries:  $1.00\
|Chorley Cat Cakes         $0.45|
\Tweety's Tasty Turnovers  $0.75\
|                               |
\                               \

Your total cost is $11.12
```

Challenges -
- Trying to not get the animation stuck while we are trying to wait for the user to press enter (so the code can continue)
- Using a Scanner variable
- Making the animation nice

Learned -
- How to clear a console in java using a special print statement
- How to use booleans in Java
- Using a scanner variable in Java
- Using try catch statements to make a semi multi thread so the animation works right.
